AI & Automation with ChatGPT & MS Copilot

DLF | 1-Day Intensive Training | 8 Hours

A hands-on, practical training programme designed to equip DLF real estate operations staff, managers, and trainers with the skills to leverage AI tools for daily productivity, workflow automation, and smarter decision-making.

30% CONCEPT | 50% HANDS-ON | 20% DISCUSSION

Add value.
Inspire trust.

Training Overview

Your 8-Hour Learning Journey

Nine structured sessions take you from AI fundamentals to real-world automation — with DLF-specific use cases throughout.

1. **Session 1**
   Intro to AI & Automation *30 mins*.
2. **Session 2-3**
   ChatGPT Fundamentals & Prompt Engineering *2 hrs*.
3. **Session 4**
   ChatGPT for Daily Office Tasks *2 hrs*.
4. **Session 5-6**
   AI Automation & MS Copilot *2 hrs*.
5. **Session 7-9**
   Ecosystem, Case Studies & Best Practices *1.5 hrs*.

Session 1 — 30 Minutes

Introduction to AI & Automation in the Workplace

Learning Objective: Build a foundational understanding of AI and its direct relevance to real estate operations at DLF.

The AI Evolution:

Rule-based systems → Machine Learning → Generative AI. Understanding LLMs, NLP, & how probabilistic outputs differ from traditional deterministic software.

DLF-Specific Relevance:

- Site operations reporting automation
- Vendor documentation & compliance
- Customer communication (buyers/investors)
- Lease documentation & contracts.

Live Demo:

Generate a *"Construction progress report for Gurgaon commercial project"* — AI speed vs. manual effort, side by side.

Session 2 — 1 Hour

ChatGPT Fundamentals for Office Productivity

Learning Objective: Understand how ChatGPT works in an enterprise context and adopt it safely and effectively within DLF's compliance environment.

1. How ChatGPT Works:

Architecture simplified for business users. Handling text, documents, and structured data prompts. Understanding output variability, tone, and format control.

2. Responsible Usage:

No sensitive project data in public AI tools. Compliance considerations in real estate — contracts, pricing, and client data must remain protected.

3. Hands-on Exercises:

Convert raw notes into a structured report. Summarize a sample legal agreement. Draft a client email for a delayed project update.

4. Advanced Techniques:

Multi-step prompting strategies. Iterative refinement — improving outputs through follow-up instructions until the result meets business standards.

Session 3 — 1 Hour

Prompt Engineering for Better Results

Learning Objective: Enable participants to craft precise, business-ready prompts that extract high-quality outputs consistently.

1. Role:
"Act as a Project Manager at a commercial real estate firm..."

2. Task:
""Generate a weekly site progress report..."

3. Context:
"For the Gurgaon Tower 3 project, covering safety, labour, and milestones..."

4. Output:
"In a structured table with an executive summary at the top."

Participants will practice **improving poor prompts into optimized ones** and build reusable prompt templates for site reporting, vendor communication, and client updates — tools they can use from Day 1.

Three Powerful Prompt Styles

Instructional Prompts:

Direct, command-style prompts for specific tasks. *"Write a vendor follow-up email for delayed material delivery to the Sector 54 site."* Best for routine, repeatable tasks.

Transformational Prompts:

Convert content from one format to another. *"Convert these meeting notes into a formal MOM with action items and owners."* Ideal for document processing.

Analytical Prompts:

Extract insights, trends, or decisions from data. *"Analyze this project cost sheet and identify the top three budget overrun areas."* Powerful for reporting and reviews.

Session 4 — 2 Hours (Core Session)

ChatGPT for Daily Office Tasks

Learning Objective: Drive high-frequency productivity gains across the most common real estate workflows at DLF.

Email Automation	Site Operations	Document Handling
Client updates & delay communications. Vendor negotiation emails. Internal approvals and escalations.	Daily Progress Reports (DPR). Safety observation summaries. Site inspection checklists.	Policy summarization. Contract clause explanation. Tender document breakdown.

Meeting Productivity	Planning & Workflow
Minutes of Meeting (MOM). Action tracker generation. Follow-up email drafts.	Task prioritization matrix. Weekly planning templates. Resource allocation drafts.

Hands-on Lab:

Every participant will create 1 DPR, 1 Client Email, 1 Meeting MOM, and 1 Task Plan — using ChatGPT — before this session ends.

Session 5 — 1 Hour

AI Automation with ChatGPT

Learning Objective: Shift from individual usage to an automation mindset — building reusable, scalable AI workflows.

The Automation Shift:
Moving beyond one-off prompts to structured Input → Process → Output workflows. Prompt templates replace manual effort for recurring tasks.

Reusable Prompt Libraries:
Create a library of tested prompts that any team member can use, reducing variability and ensuring consistent, high-quality outputs.

DLF Automation Scenarios:

- **Daily Site Report Generator:**
  Feed in raw data → auto-generate formatted DPR.
- **Weekly Project Summary:**
  Automate leadership updates from progress logs.
- **Customer Query Response:**
  Templated replies for common buyer/investor queries.
- **Vendor Follow-up Automation:**
  Consistent, professional vendor communication at scale.

Mini Workshop: Build a "Weekly Project Update Generator" template you can use next Monday.

Session 6 — 1 Hour

Microsoft Copilot in Office Tools

Learning Objective: Leverage Copilot's deep integration within Microsoft 365 for structured, enterprise-grade workflows — without leaving the tools you already use.

1. **Word:**
   Draft site reports and executive summaries. Edit and redline contracts. Generate policy documents from bullet points.

2. **Excel:**
   Data cleaning and formatting. Trend analysis and cost variance tracking. Forecasting for project cost management.

3. **PowerPoint:**
   Auto-create project status presentations. Convert written reports into structured slides instantly.

4. **Outlook:**
   Summarize long email threads. Draft contextual replies. Assist with meeting scheduling and follow-ups.

Session 7 — 45 Minutes

Other AI Tools for Productivity

Learning Objective: Expand awareness beyond ChatGPT — building familiarity with the broader AI ecosystem relevant to real estate professionals.

Perplexity AI:

Use case: Real-time market research. Track real estate trends, regulatory updates, and competitor intelligence with cited, up-to-date sources. Ideal for investor presentations and market analysis reports.

Gamma AI:

Use case: Auto-generate presentations. Convert project briefs or reports into polished decks in minutes — perfect for leadership reviews and stakeholder communications.

Canva AI:

Use case: Marketing creatives. Generate property marketing brochures, social media assets, and investor decks with brand-aligned design — no design team required.

Fireflies AI:

Use case: Meeting transcription and summaries. Auto-record, transcribe, and summarize meetings — generating action items and decisions automatically for follow-up.

Session 8 — 30 Minutes

Real Corporate Use Cases & Hands-on Challenge

Activity-Based Learning: Teams tackle real DLF scenarios and present AI-generated outputs — trainer reviews, critiques, and optimizes live.

Case 1:

Scenario: Site delay at the Gurgaon project.

Task: Draft a professional client communication explaining the delay, revised timeline, and remediation steps — using ChatGPT.

Case 2:

Scenario: Vendor has failed to deliver materials on schedule.

Task: Generate an escalation email to the vendor with clear consequences and a resolution request — firm but professional.

Case 3:

Scenario: Monthly project status must go to leadership.

Task: Convert raw project data and meeting notes into a structured executive summary — ready for the MD's desk.

Each group presents their AI-generated output. The trainer provides live feedback — demonstrating how prompt refinement transforms good outputs into great ones.

Session 9 — 15 Minutes

AI Best Practices & Open Q&A

THE GOLDEN RULES

1 Always Validate Outputs

AI can hallucinate. Every output must be reviewed by a human before use in any official communication or document.

2 Protect Sensitive Data

Never input project pricing, client PII, or contractual terms into public AI tools. Use enterprise-secured versions where available.

3 Maintain Human Oversight

AI augments your expertise — it does not replace judgement, accountability, or professional responsibility.

4 Use AI for Augmentation

Focus AI on tasks that free up your time for higher-value work — strategy, relationships, and complex problem-solving.

Discussion Prompts

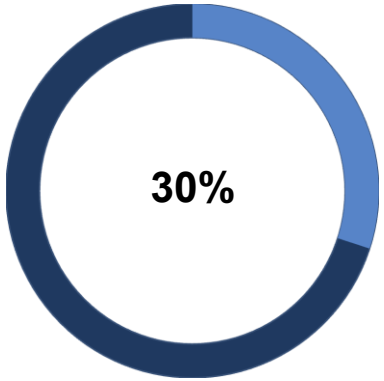
Open the floor to honest conversation about AI adoption at DLF:

- What are the biggest barriers to using AI in your role?
- Which task from today would you automate first?
- How do we ensure quality control when AI is involved?
- What approval or governance is needed at DLF before scaling AI use?

Participants are encouraged to identify at least **one use case** from their own work that they commit to testing with AI in the next 30 days.

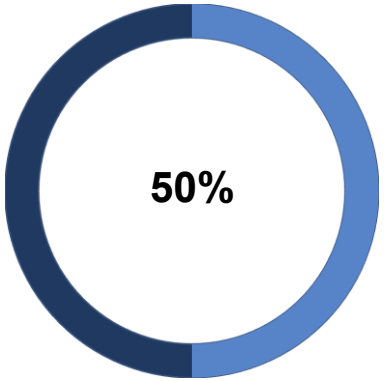
Trainer Delivery Strategy

This programme is deliberately designed to be action-first — participants spend more time doing than listening.



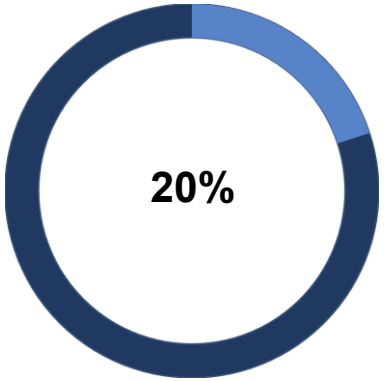
Concept

Focused theory — only what you need to understand to act effectively.



Hands-on

Live practice on real DLF scenarios. Every participant produces actual work outputs.



Discussion

Peer learning, adoption challenges, use-case identification, and trainer Q&A.

Additional Value Additions

Before, During & After the Training

This programme is deliberately designed to be action-first — participants spend more time doing than listening.

1. Pre-Training

Skill assessment survey sent to all participants. Collect sample DLF documents — DPRs, vendor emails, MOMs — to use as real training material during sessions.

2. During Training

Every session includes live practice. Participants use actual DLF scenarios — not generic examples — so outputs are immediately applicable to their work.

3. Post-Training Toolkit

Each participant receives: a DLF-specific prompt library, ready-to-use templates for DPR, MOM, and email, and an optional 30-day AI adoption plan.

4. Follow-up Session

Optional 2-hour follow-up 30 days later — to review real adoption progress, troubleshoot challenges, and introduce advanced automation techniques.

What You Will Walk Away With

By the end of this 8-hour programme, every DLF participant will have tangible skills and tools ready to deploy on Day 1.

01

A Personal Prompt Library

Reusable, tested prompts for your most common tasks — site reporting, vendor communication, client emails, & meeting MOMs.

02

Real Work Outputs Created Today

You will have already produced a DPR, a client email, a meeting MOM, and a task plan using AI — proof that you can do this in your actual role.

03

Automation Mindset

The ability to identify any repeatable task and design an AI-driven workflow that saves hours every week — scaling impact across your team.

Start Your AI Journey at DLF Today

AI is not replacing real estate professionals — it is amplifying the ones who learn to use it well. This training is your first step towards working faster, communicating more effectively, and driving greater impact across every project, every site, and every team interaction.

- **Learn:**
  - Understand AI fundamentals and how they apply to your real estate role at DLF.
- **Practice:**
  - Build real outputs using ChatGPT and Copilot on actual DLF scenarios during the training.
- **Apply:**
  - Return to your desk with a personal toolkit and the confidence to use AI from Day 1.
- **Scale:**
  - Grow from individual usage to team-wide automation — multiplying the impact across DLF operations.

Thank You!
