

AI IN FINANCE & CORPORATE MANAGEMENT

An Executive Training Program

5-Day Program | 4 Hours per Day | 20 Hours Total

Program Overview

Finance executives need to understand how AI impacts the P&L, how to manage execution risk, and how to structure governance around AI adoption. This program is built strictly around strategic ROI, risk mitigation, and resource allocation and use of AI tools.

Audience	Finance executives and corporate management leadership
Duration	5 days, 4 hours per day (20 hours total)
Programming Language	Python — basic level only, no prior coding experience required
AI Tools Used	Julius AI, Claude, ChatGPT, Google Gemini, NotebookLM
Delivery Format	Facilitated lecture, live tool demonstrations, guided hands-on labs, case-based discussion

Executive Framework Template

Every use case across all five days is presented and discussed using this four-dimension matrix, so participants leave with a repeatable structure for evaluating any future AI proposal.

Dimension	Executive Focus
The Value Proposition	Direct impact on EBITDA, working capital efficiency, or risk reduction.
Current vs. Future State	Manual spreadsheet cycles vs. automated, exception-based oversight.
Key Execution Risks	Data quality bottlenecks, legacy system integration, and change management.
Metric of Success	Reduction in Days Sales Outstanding (DSO), hours saved on close, or forecast variance reduction.

DAY 1

Framing AI as a tool for precision and competitive advantage, not just an upgrade to Excel.

Objective: Equip executives to evaluate ML-driven forecasting, real-time liquidity models, and scenario stress-testing as strategic capabilities.

Time	Session	Format	Details
09:00–09:10	Welcome & Program Orientation	Lecture	Program goals, agenda walkthrough, introduction of the Executive Framework Template.
09:10–10:10	1. Precision Forecasting	Lecture + Discussion	Contrast rigid linear models with ML models that ingest macro indicators, inflation trends, and external pipeline data.
10:10–10:20	Break	—	
10:20–11:20	2. Real-Time Liquidity Management	Lecture + Demo	Pivoting cash flow analysis from historical monthly reporting to forward-looking, real-time liquidity predictive models.
11:20–11:30	Break	—	
11:30–12:30	3. Strategic Scenario Stress-Testing	Lecture + Live Demo	How algorithmic simulations (e.g., Monte Carlo) let finance teams simulate 10,000+ market-shock variations instantly.
12:30–13:00	Applied Lab: Framework Mapping	Hands-on Lab	Participants map a forecasting use case from their own business (or sample provided) onto the Executive Framework Template; Q&A.

Tools & applied practice: *Julius AI for a no-code forecasting walkthrough; a basic Python notebook to show a simple Monte Carlo stress-test simulation (no prior coding required).*

DAY 2 Efficiency & Capital Optimization: Intelligent Operations

Cost reduction, processing speed, and freeing human capital for strategic work.

Objective: Enable executives to identify where document intelligence, reconciliation automation, and procurement auditing free up capital and headcount.

Time	Session	Format	Details
09:00–09:10	Recap & Day 2 Objectives	Lecture	Quick recap of Day 1 framework mappings.
09:10–10:10	1. Document Intelligence (IDP)	Lecture + Demo	The shift from legacy OCR to LLMs capable of interpreting complex cross-border trade contracts and vendor documents.
10:10–10:20	Break	—	
10:20–11:20	2. Zero-Touch Reconciliation	Lecture + Case Study	ML matching as a lever to compress the financial close cycle from weeks to days by automating variance discovery.
11:20–11:30	Break	—	
11:30–12:30	3. Smart Procurement Auditing	Lecture + Demo	AI agent deployment to eliminate manual expense reviews and catch leakage or policy violations at scale.
12:30–13:00	Applied Lab: Framework Mapping	Hands-on Lab	Participants score a close-cycle or procurement use case against the framework's Metric of Success dimension; Q&A.

Tools & applied practice: *Claude and ChatGPT for live document-intelligence and variance-commentary demos; Julius AI for a reconciliation exception-flagging walkthrough.*

DAY 3 Risk Management: Proactive Forensic Analytics

Positioning AI as the shield against operational, regulatory, and reputational risk.

Objective: Give executives a working vocabulary for continuous auditing, fraud-network detection, and automated compliance tracking.

Time	Session	Format	Details
09:00–09:10	Recap & Day 3 Objectives	Lecture	Quick recap of Day 2 framework mappings.
09:10–10:10	1. Continuous Transaction Auditing	Lecture + Demo	Moving from sample-based quarterly audits to automated, 100% transaction coverage using real-time anomaly detection.
10:10–10:20	Break	—	
10:20–11:20	2. Procurement & Vendor Fraud Protection	Lecture + Case Study	How network-graph analysis flags ghost vendors, split-purchase schemes, and collusion patterns before cash leaves the bank.
11:20–11:30	Break	—	
11:30–12:30	3. Regulatory & Compliance Safeguards	Lecture + Discussion	Automated tracking of changing global tax codes, trade tariffs, and reporting mandates.
12:30–13:00	Applied Lab: Framework Mapping	Hands-on Lab	Participants stress-test a risk use case against the framework's Key Execution Risks dimension; Q&A.

Tools & applied practice: A basic Python notebook to visualize a simple transaction-anomaly flag; Julius AI for exploratory anomaly-detection analysis; Claude/ChatGPT for summarizing a mock regulatory-change bulletin.

DAY 4 The Executive Copilot: GenAI & Strategic Decision Support

How generative AI accelerates executive throughput and strategic synthesis.

Objective: Show executives how GenAI copilots synthesize competitor intelligence, draft board-ready commentary, and enable natural-language access to internal data.

Time	Session	Format	Details
09:00–09:10	Recap & Day 4 Objectives	Lecture	Quick recap of Day 3 framework mappings.
09:10–10:10	1. Competitor Intelligence Synthesis	Lecture + Live Demo	How internal LLMs ingest thousands of pages of competitor earnings transcripts and map market threats.
10:10–10:20	Break	—	
10:20–11:20	2. Automated Variance Commentary	Lecture + Live Demo	Pipelines that ingest raw ERP data and output polished, first-draft executive board notes and financial commentary.
11:20–11:30	Break	—	
11:30–12:30	3. Conversational Data Repositories	Lecture + Live Demo	Secure Retrieval-Augmented Generation (RAG) setups that let executives query decades of historical internal data in plain text.
12:30–13:00	Applied Lab: Framework Mapping	Hands-on Lab	Participants draft a sample board commentary using a GenAI Tool and score it against the framework; Q&A.

Tools & applied practice: *Claude, ChatGPT, and Google Gemini for competitor-synthesis and variance-commentary demos; NotebookLM for a conversational, RAG-style query of a sample internal document set.*

DAY 5 Executive Governance & MLOps Guardrails

The most critical day: addressing security, accuracy, and liability head-on.

Objective: Prepare executives to defend AI-driven outputs to boards, auditors, and regulators, and to close the program with an integrated action plan.

Time	Session	Format	Details
09:00–09:10	Recap & Day 5 Objectives	Lecture	Quick recap of Days 1–4 framework mappings.
09:10–10:10	1. Data Sovereignty & Security	Lecture + Discussion	Zero-data-retention policies and private cloud deployments that guarantee proprietary financial data never trains public models.
10:10–10:20	Break	—	
10:20–11:20	2. Mitigating Hallucinations & Financial Risk	Lecture + Case Study	Strict verification loops, programmatic guardrails, and the mandatory human-in-the-loop approval architecture.
11:20–11:30	Break	—	
11:30–12:15	3. Explainable AI (XAI) & Auditability	Lecture + Discussion	Solving the 'black box' dilemma so model outputs can be explicitly defended to boards, auditors, and regulators.
12:15–13:00	Capstone: Integrated Action Plan	Group Presentation	Participants present one consolidated, framework-mapped AI use case from their own domain, with governance controls attached. Program wrap-up and close.

Tools & applied practice: Claude and ChatGPT to demonstrate guardrail prompting and human-in-the-loop review steps; open discussion on XAI reporting formats for board packs.

Program Assessment & Success Metrics

Participant readiness is assessed through daily framework-mapping exercises and the Day 5 capstone presentation, rather than a written exam. Suggested organizational success metrics, drawn from the Executive Framework Template, include:

- Reduction in Days Sales Outstanding (DSO)
- Hours saved per financial close cycle
- Reduction in forecast variance
- Number of AI use cases formally scoped using the Executive Framework Template within 90 days of program completion

Prerequisites & Logistics

- No prior coding experience required — all Python shown is basic-level and demonstration-only. Free Account on Google Colab is sufficient.
- Participants should bring a laptop with browser access to Claude, ChatGPT, Google Gemini, Julius AI, and NotebookLM.
- One real, anonymized use case from the participant's own function, for use in the Day 5 capstone.
