

Creating Compartments

What is a Compartment in OCI ?

In Oracle Cloud Infrastructure (OCI), a **compartment** is a secure, logical container used to organize and isolate your cloud resources - like

- buckets,
- virtual machines, and
- databases

Key Characteristics

- **Security Boundaries:** You apply access policies to a compartment to control exactly which users can see or modify the resources inside it.
- **Hierarchical Structure:** Compartments can be nested inside other compartments, much like subfolders on your computer.
- **The Root Compartment:** Every OCI account has a default main compartment (named after your tenancy) that acts as the root folder for everything

Create compartment

Follow these steps to create a new compartment in the OCI Console:

1. Navigate to Compartments

1. Open the OCI Navigation Menu (the burger menu in the top left corner).
2. Go to **Identity & Security**.
3. Under the **Identity** section, click on **Compartments**. [[1](#), [2](#)]

2. Configure and Create

1. Click the blue **Create Compartment** button. [[1](#)]
2. Fill out the required details:
 1. **Name:** Give it a clear, short name (e.g., `AI-Testing` or `Finance-Dept`). Do not use spaces.
 2. **Description:** Add a brief note explaining what this compartment will hold.
 3. **Parent Compartment:** Choose where this folder should live. Select your root tenancy compartment if you want it at the top level. [[1](#), [2](#), [3](#), [4](#), [5](#)]
