

AI Service - Language

← Click

OCI Language is a serverless, pre-trained AI service used to **analyze unstructured text** and extract insights without requiring any machine learning expertise.

You simply feed it text ,such as

- customer reviews,
- support tickets, or
- Emails

and it processes the language instantly via REST APIs or SDKs

Extract insights from Unstructured Text ✓

Use OCI Language to perform sophisticated text analysis at scale. With pre-trained models and custom models developers can process unstructured text and extract insights without data science expertise. Pre-trained models support sentiment analysis, key phrase extraction, text classification, named entity recognition and you can also train custom models for named entity recognition and text classification with domain specific datasets. Translation service enables you to translate text across 21 different languages.

Pretrained models

Language detection ✓

Identify the language of your text from more than 75 languages.

Text classification ✓

Classifies text content into more than 600 categories.

Sentiment analysis ✓

Extract sentiment expressed towards product and product aspects.

Key phrase extraction ✓

Identify the most salient talking points in your text.

Named entity recognition ✓

Identify entities such as people, places, organization, date, etc in text.

PII/PHI Detection ✓

Detect private information and mask, replace or remove them from text records.

Healthcare NLP ✓

Provides state of the art service to extract entities from healthcare records.

Yesterday, John Doe (born 05/14/1985) called our Boston clinic at 555-0199 because he was feeling discomfort with his recent knee surgery recovery.

He mentioned that is struggling with severe insomnia afterwards and is having trouble sleeping.

Dr. Smith reviewed his medical record (ID: 94827) and noted the need to address the sleep issue.
